

# the Eliminator B100

Salt-Free System!

Maintenance-Free System!

Eliminate Chlorine

Eliminate Calcium & Magnesium!

Eliminate Damaging Hard Water!

Improve Your Plumbing  
& Appliances!

The environmentally friendly way to improve the water in your life!

## HOW LONG BEFORE I SEE RESULTS?

Although it is not typical, results can be seen in as little as five days! Hard water build-up takes place over time, and while immediately after hooking up your new Eliminator B100 system better, cleaner, chlorine-free water is flowing it may take time to significantly effect that build-up. Typically, significant results are seen within 45 days.

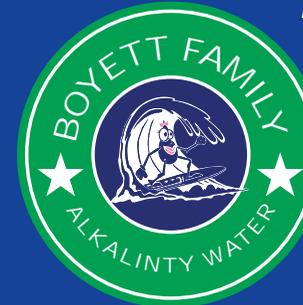

## What Is It And How Does It Work?

The Eliminator B100 is a device that wraps around your main water pipe and plugs into an electrical outlet. Using multi-vibration frequency, the water is treated as it passes through the pipe. The multi-vibration frequency treats the water in three ways:

1. Calcium carbonate molecules are converted to calcium bicarbonate. This change aids in dissolving calcium and other hard water elements from pipes and all water using equipment.
2. Secondly, the water becomes slightly ionized which dissolves calcium and makes the water more soluble.
3. Nucleation occurs in the water, preventing the calcium carbonate from adhering to surfaces. The release of Carbon Dioxide and Hydrogen from the frequency treatment causes the calcium carbonate to crystallize aragonite.
4. This system can be added to an traditional salt or potassium water softener to lower salt and potassium use by at least 50%.

### Rental Pricing

- \$50/month + tax NO CONTRACT (automatic payment and e-statements available)
- \$75 minimum installation fee (if extra plumbing is required, additional costs may incur)
- NO CHARGE FOR MAINTAINENCE!

Refer a NEW Customer\* & we'll pay you \$50.00!  
IT'S FREE MONEY!

\*Winter Resident Customers  
Pay \$25.00

This tank contains carbon medium, a powerful chlorine absorbent.

## the Eliminator B100

Finally!  
Great Water  
Without Salt!

The Eliminator B100 works "by altering the interaction between ions so that scale does not occur." - Dr. Peter Fox, PhD., Professor of Sustainable Studies at Arizona State University  
This device causes the water to be able to hold more minerals in solution without forming scale.

# Is Chlorine in Your Shower Water Making You Sick?

By Stan Howard

You wouldn't knowingly bathe in toxins every morning, or set out to harm your lungs and sinuses, irritate your allergies and skin, or willingly increase your risk of cancer. But the fact is, chlorine and its by-products in your shower water are toxins which can damage your health.

These toxins are:

**Chlorine:** Added to most municipal water supplies, this disinfectant hardens arteries, destroys proteins in the body, irritates skin and sinus conditions, and aggravates asthma, allergies, and respiratory problems.

**Chloroform:** This powerful by-product of chlorination causes excessive free-radical formation (accelerated aging), normal cells to mutate, and cholesterol to oxidize. It's a known carcinogen!

**DCA (Dichloro acetic acid):** This chlorine

by-product alters cholesterol metabolism and has been shown to cause liver cancer in lab animals.

**MX (another chlorinated acid):** Another by-product of chlorination, MX is known to cause genetic mutations that can lead to cancer growth and has been found in all chlorinated water for which it was tested.

Research indicates an increased risk for bladder and rectal cancer from drinking chlorinated water. And even though you're not drinking water in the shower, you can absorb many times more chlorine in a shower than you do by drinking the same water! Tests show that your body can absorb more chlorine as a result of a 10-minute shower than if you drank eight glasses of the same water.

How can that be? A warm shower opens up your pores, causing your skin to act like a sponge. As a result, you not only inhale the chlorine vapors, you also absorb them through your skin, directly into your bloodstream-at a rate that's up to six times higher than drinking.

Short terms risks include skin, eye or sinus irritation in some people. Long term risks include oxidation (cell and tissue aging), hardened arteries and increased risk of cancer. In addition, if you suffer from any of the following, chlorinated water can make your condition worse: asthma, sinus conditions, allergies, skin rashes, emphysema.

The good news is that showering in chlorine-treated water is a risk you can erase immediately, through the use of a proper shower filter. Be sure to choose a shower filter with carbon medium, a powerful chlorine absorbent.

According to Dr. Francis T. Mayo, Director of the Municipal Environmental Research Laboratory,

*"Since chlorine is required by public health regulations to be present in all public drinking water supplies, it is up to the individual to remove it at the point-of-use in the home."*

## TESTIMONIAL

Dear Mr. Boyett,

I appreciate very much the opportunity I have had in trying out and testing your new whole house water concept system\*. I have been using your new system in my home for several months now and am happy to report that I am more than satisfied with the quality and excellence of this new system.

So far I have found it to be dependable and reliable. I am very pleased with the fact that it is both durable and reliable. I have found that your new system effectively removes both hardness and chlorine from the water. I have found no scale build up around the sink, bath tub or shower.

Another big plus is that I no longer have to lug large bags of salt to the conditioner as I did in the last system I used. This is not only difficult for me to do, but I have the peace of mind of not having to use salt in the treatment of the water going to all parts of my home.

My wife has commented that her skin is softer since eliminating the chlorine and her hair is more manageable. There is also no chlorine odor or taste to the water. I often wash the dishes and find it is now easier to get the flatware and glasses clean without the problem of spotting. I see no scale build-up or staining of plumbing fixtures.

I have no way of knowing or testing our washer and dryer, but I am quite sure the improved water going to the laundry room has a positive effect in the cleanliness of our clothes and probably allows us to use less soap.

I have not been using the system long enough to determine how durable and reliable it will prove to be over a long period of time but I am quite sure you have come up with a quality and reliable new system.

I am pleased to participate in testing this new whole house water system\* and will continue to do so as long as is necessary to complete the test period.

Sincerely,

Theo J Heap PhD
