Water Saving Alkalinity Reverse Osmosis buying vs. renting

The Initial investment to purchase a Boyett Family water saving alkalinity reverse osmosis unit \$896.82 (this price includes tax and installation).

Year 1

Initial investment \$896.82

Year 2

\$206.02 service and filter change

\$167.48 new membrane to keep A+ RO water

Year 3

\$206.02 service and filter change

\$167.48 new membrane to keep A+ RO water

Year 4

\$206.02 service and filter change

\$167.48 new membrane to keep A+ RO water

Year 5

\$642.18 (includes tax); per the manufacture; the entire unit must be rebuilt (all lines and canisters are replace; this price includes filters and sanitation; and a new membrane)

The unit must be brought into our factory (we will return this rebuilt RO and reinstall this one week later)

Total money invested over 5 years owning a reverse osmosis \$2,659.50

Our Mission is to be the best water treatment company in the United States by providing exceptional customer service and exceptional products and services that exceed our clients' expectations. It is our goal to provide a safe working environment with the best tools to facilitate our work. Our company is committed to following the Water Quality Association's code of ethics; working with our co-workers and clients honorably and with the highest degree of respect and integrity. We are proud that we work drug free.

Owned and operated by the Boyett family for over 46 years.

To rent a Water Saving Alkalinity Reverse Osmosis at \$36/month plus tax; \$75 installation fee:

We change the unit out every year. This includes all the filters and membrane.

Total money invested renting a reverse osmosis unit over 5 years

\$2,334.00 monthly payments over 5 years

+ 75.00 initial installation fee

\$2,409.00

If you give us a positive testimony on one of the public internet platforms (every 6 months) we will give you one month free each time. Savings over 5 years \$389.00.

To rent a reverse osmosis over a 5 year period vs. purchasing; you will save \$250.50 + \$360.00 'positive comment rewards' = \$639.50 savings by renting.

Here is a web page address in which we ask and answer questions about reverse osmosis units and discuss the evolution of this process:

The following link summarizes an article explaining the drugs that are being found in many water sources; and explains the reverse osmosis process will 'solve most of these concerns'. However, it is more important to maintain the reverse osmosis membrane as new – due to the heightened water concerns:

We would like to introduce to you our new RO leak control device (reverse osmosis systems Phoenix, Arizona). This is our third generation RO leak control device. We first heard that we can apply a leak controller to protect your assets in 2007. From the time we installed our first leak controller; we have installed all of our RO units with leak controllers. We will always look for the best gear and parts to provide to you. I make this personal promise to you: if there is a better leak controller that is developed – we will always change yours to the best.

Flowlok Leak Protection System

This is how the RO leak protection device appears

economical device that all water filtration owners should have to help minimize issues associated with water damage. Flowlock is easy to install and retrofits takes no more than 15 minutes to perform.

The Flowlok Leak Detector (FLK-14) is an innovative device that installs right below your water filtration system in minutes. No special tools are required and it does not need electricity (or batteries) to operate. Flowlok leak detectors (FLK-14) utilize a highly compressed safety disc (FLK-Pad) that expands when it absorbs water. Once the safety disc has detected water it expands and trips the Flowlok safety lever to shut off the water entering the water filtration device. Safety discs are replaceable. Boyett's Family Rayne Water Conditioning will provide these safety discs (FLK-Pad) at no charge.

Boyett's Family Rayne Water Conditioning includes these as a standard feature on all of our reverse osmosis installations. If you rent an RO unit from our company; we will change this unit every 5 years at no charge.

Leak detectors will prevent this:

This is the component we have discovered to make the RO process more feasible for our clients (saves water and raises the PH 'provides you delicious tasting water'). We can now add magnesium to your water by utilizing a natural resource.

. Based upon our research 50% of people need more magnesium in their diet; we may be able to help you.

This process we call our New RO Development
