

We would like to introduce to you our new RO leak control device (reverse osmosis systems Phoenix, Arizona). This is our third generation RO leak control device. We first heard that we can apply a leak controller to protect your assets in 2007. From the time we installed our first leak controller; we have installed all of our RO units with leak controllers. We will always look for the best gear and parts to provide to you. I make this personal promise to you: if there is a better leak controller that is developed – we will always change yours to the best.

Flowlok Leak Protection System

This is how the RO leak protection device appears

Part number FLK-14

FLK-Pad

According to the company that manufactures this product:

The Flowlok leak protection system is a series of products designed to help customers' safe guard against possible leaks from their water filtration System. The products help consumers by shutting off the water supply to their filtration system if water from a leak is detected. The Flowlok Leak Protection System requires no electricity and is an economical device that all water filtration owners should have to help minimize issues associated with water damage. Flowlock is easy to install and retrofits takes no more than 15 minutes to perform.

The Flowlok Leak Detector (FLK-14) is an innovative device that installs right below your water filtration system in minutes. No special tools are required and it does not need electricity (or batteries) to operate. Flowlok leak detectors (FLK-14) utilize a highly compressed safety disc (FLK-Pad) that expands when it absorbs water. Once the safety disc has detected water it expands and trips the Flowlok safety lever to shut off the water entering the water filtration device. Safety discs are replaceable. Boyett's Family Rayne Water Conditioning will provide these safety discs (FLK-Pad) at no charge.

Boyett's Family Rayne Water Conditioning includes these as a standard feature on all of our reverse osmosis installations. If you rent an RO unit from our company; we will change this unit every 5 years at no charge.

Leak detectors will prevent this:

12.01.15 12:05 PM

This is the component we have discovered to make the RO process more feasible for our clients (saves water and raises the PH 'provides you delicious tasting water'). We can now add magnesium to your water by utilizing a natural resource.

. Based upon our research 50% of people need more magnesium in their diet; we may be able to help you.

This process we call our New RO Development
