

Clarify Reverse Osmosis + Mg + pH + Water Saving Membrane

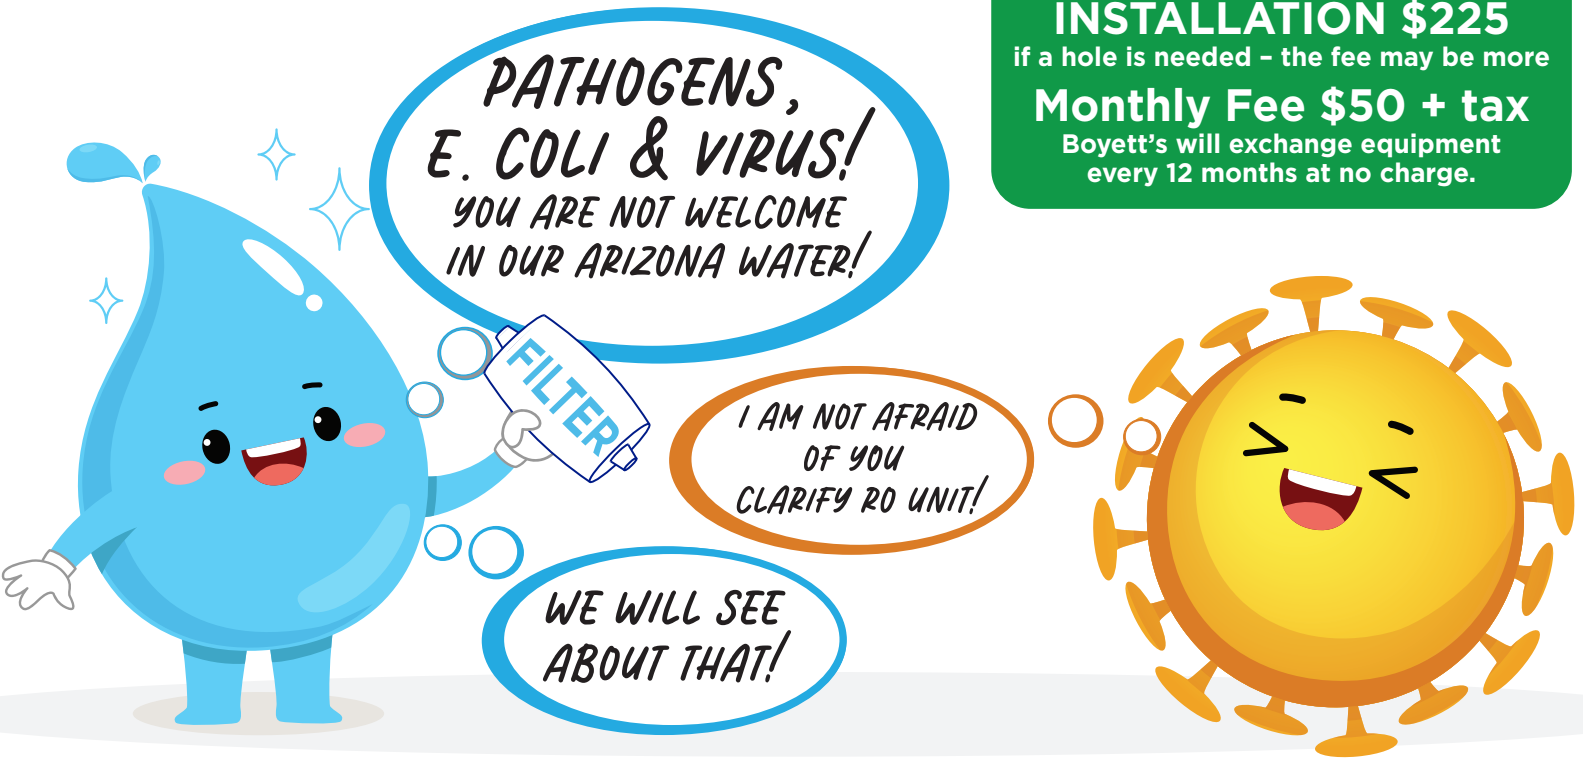

This RO Unit will Disintegrate all Pathogens, Viruses and E. Coli

INSTALLATION \$225

if a hole is needed - the fee may be more

Monthly Fee \$50 + tax

Boyett's will exchange equipment every 12 months at no charge.

**PATHOGENS,
E. COLI & VIRUS!**
YOU ARE NOT WELCOME
IN OUR ARIZONA WATER!

I AM NOT AFRAID
OF YOU
CLARIFY RO UNIT!

WE WILL SEE
ABOUT THAT!

IN PHOENIX ARIZONA AND ALL THE SURROUNDING CITIES - 82 PERCENT OF THE WATER YOU DRINK IS TREATED SEWAGE WATER.

In sewage water there are pathogens and viruses and E.coli. All of our drinking water units should have a special filter that disintegrates all pathogens, viruses and E.coli.

We exchange our RO unit every 12 months (this includes all the filters and membrane and the clarify filter).

HOW DOES IT WORK:

Phoenix metro area Arizona Toilet water to your drinking water faucet

This unit will make sure that no E.Coli, pathogens or viruses get to your drinking water.

We exchange your RO unit every 12 months utilizing our 'indubitably exchanging your rental water treatment equipment approach'.

Clarify Reverse Osmosis + Mg + pH + Water Saving Membrane

This RO Unit will Disintegrate all Pathogens, Viruses and E. Coli

No Chemicals – No Power – No Pathogens – No Electricity

IF YOU RUN OUR REVERSE OSMOSIS WATER THROUGH THIS FILTER – THIS WILL REMOVE ANY PATHOGENS.

Our Clarify water saving reverse osmosis drinking water system will utilize the Clarify filter with quantum disinfection (QD). QD is a new generation of nanocomposite materials with activated surfaces that kills pathogens like bacteria (E coli, Staphylococcus, Legionella, viruses (MS2) and protozoa (Cryptosporidium) from water, with no power, no chemicals and no maintenance.

QD USES QUANTUM MECHANIC PRINCIPLES

Quantum disinfection is a new generation of nanocomposite materials with activated surfaces that kills pathogens like bacteria

(E.coli, Staphylococcus, Legionella, viruses (MS2) and protozoa (Cryptosporidium) from water, with no power, no chemicals and no maintenance.

Quantum Disinfection is a revolutionary technology that uses the quantum mechanic principles of electron movements in micro-crystals creating powerful catalysts applied for drinking water purification.

This is the media that will be placed into our clarify filter (it is silver coated alumina). When the water runs over this media it will neutralize the electrons in the really bad water molecules and cause the bad bad water molecules to disintegrate. When your water runs over our beads – no more toilet water.

It is made in the USA.

Clarify Reverse Osmosis + Mg + pH + Water Saving Membrane

This RO Unit will Disintegrate all Pathogens, Viruses and E. Coli

WE WOULD LIKE TO INTRODUCE TO YOU OUR NEW RO LEAK CONTROL DEVICE

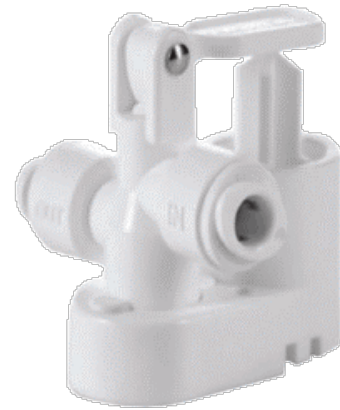

(reverse osmosis systems Phoenix, Arizona). This is our third generation RO leak control device. We first heard that we can apply a leak controller to protect your assets in 2007. From the time we installed our first leak controller; we have installed all our RO units with leak controllers.

We will always look for the best gear and parts to provide to you. I make this personal promise to you: if there is a better leak controller that is developed - we will always change yours to the best.

Flowlok Leak Protection System This is how the RO leak protection device appears Part number FLK-14 FLK-Pad Images in this picture: Water supply, the FLK-14 and Reverse osmosis tubing According to the company that manufactures this product: The Flowlok leak protection system is a series of products designed to help customers' safe guard against possible leaks from their water filtration System. The products help consumers by shutting off the water supply to their filtration system if water from a leak is detected.

The Flowlok Leak Protection System requires no electricity and is an economical device that all water filtration owners should have to help minimize issues associated with water damage. Flowlock is easy to install and retro-

FLOWL**OK**

fits takes no more than 15 minutes to perform. The Flowlok Leak Detector (FLK-14) is an innovative device that installs right below your water filtration system in minutes. No special tools are required and it does not need electricity (or batteries) to operate.

Flowlok leak detectors (FLK-14) utilize a highly compressed safety disc (FLK-Pad) that expands when it absorbs water. Once the safety disc has detected water it expands and trips the Flowlok safety lever to shut off the water entering the water filtration device. Safety discs are replaceable. Boyett's Family Water Treatment will provide these safety discs (FLK-Pad) at no charge. Boyett's Family Family Water Treatment includes these as a standard feature on all of our reverse osmosis installations. If you rent an RO unit from our company; we will change this unit every 5 years at no charge.

Clarify Reverse Osmosis + Mg + pH + Water Saving Membrane

This RO Unit will Disintegrate all Pathogens, Viruses and E. Coli

THIS IS FRANCISCO LOVING HIS WORK.

If you receive a rental RO unit from our company - Francisco's loving and expert care has been applied to your RO unit. Seeing this loving care applied to your pure water every single day is amazing. It gets better. Francisco gets better. The principle of kaizen is alive and well in Francisco's life and in his career.

In this image Francisco is preparing the purified water fittings that transport the Clarify RO +Mg + pH water to each fitting and to the RO faucet. If these fittings are not properly prepared; you will not receive delicious water. If these fittings are not properly installed; your house could flood 'you might have to rebuild your house because of black mold'. We love to see this care. We care to perform our work right the first time.
